

Arlington Heights Park District has made efforts to control and manage the impact of the Emerald Ash Borer (EAB) through removals and replacements as well as treatments of valuable park trees. There are a number of trees still being treated every other year. Replacement trees will be of a diverse variety to prevent future impact of disease or insects on one specific tree species.

Any questions regarding tree maintenance or the Emerald Ash Borer should be directed to Parks and Planning- Grounds Maintenance 847-577-3018.
